Absorption Spectra

Calculation of force constants in some methyl compounds, J. W. Linnett—91

Coriolis perturbations in the spectra of silane and germane, George M. Murphy—71

Chrome alum, energy levels, R. Finkelstein and J. H. Van Vleck—790

Chrome alum, note on the Zeeman effect, J. H. Van Vleck—787

Europium ion in some hydrated salts, F. H. Spedding, C. G. Moss and R. C. Waller—908

Hindered rotation in methyl alcohol, Bryce L. Crawford, Jr.—744(L)

Infra-red of

Dimethyl sulfide, $(CH_3)_2S$, R. Fonteyne—60

Ethylene, C_2D_2, C_2DH and C_2H_2, Fred Stitt—56

Ethylene, fine structure of the 3.35μ band, L. G. Smith—798

Fatty acid vapors, R. C. Herman—252

Formic acid vapors DCOOH and DCOOD, R. C. Herman and V. Williams—447

Halogen derivatives of methane, an interpretation, H. Volkringer, J. Lecomte and A. Tchakirian—126(L)

HF in vapor and in solution in an inert solvent, A. M. Buswell, R. L. Maycock and W. H. Rodebush—362

HF liquid and aqueous solution, Austin L. Wahrhaftig—349(L)

Hydrazoic acid, methyl azide and methyl isocyanate, E. H. Eyster and R. H. Gillette—369

Hydrazoic acid, rotational structure, Eugene H. Eyster—135

Methyl acetylene, Bryce L. Crawford, Jr.—526

Methylamine, R. G. Owens and E. F. Barker—229

Methylamine and dimethylamine vapors, A. P. Cleaves, H. Sponer and L. G. Bonner—784

Methylphenylacetylene, M. J. Murray and F. F. Cleveland—133

OH Band and association, J. Errera, R. Gaspart and H. Sack—63

Organic hydroxyl compounds in the solid state in the 3μ region, Mansel M. Davies—577

Phenol and its halogen derivatives, O. R. Wulf, E. J. Jones and L. S. Deming—753

Phenol and its halogen derivatives in the region of the second overtone of the OH absorption, O. R. Wulf and E. J. Jones—745

Phenyl mustard oil in the 4.8μ region, Dudley Williams—513

Sugars, E. S. Barr and C. H. Chrisman, Jr.—51

Undecane, S. E. Whitcomb, H. H. Nielsen and L. H. Thomas—143

Intensities in molecular electronic spectra. X. Calculations on mixed-halogen, hydrogen halide, alkyl halide, and hydroxyl spectra, Robert S. Mulliken—382

Lattice vibrations of crystals and the corresponding vibrations of their solutions, S. I. Weissman and Simon Freed—227

Lattice vibrations of crystals and the corresponding vibrations of their solutions. II. Simon Freed and S. I. Weissman—840

Lifetime of fluorescence in diacetyl and acetone, G. M. Almy and Scott Anderson—805

New uviol glass of the binary system CaF_2-SiO_2, Choong Shin-Piaw—129(L)

Nitrogen dioxide in the visible spectrum, J. K. Dixon—157

Note on electronic absorption spectra in solution, A. L. G. Rees—429(L)

On the predissociation of several diatomic molecules, G. Herzberg and L. G. Mundie—263

Relation between the energy of a hydrogen bond and the frequencies of the O−H bands, Richard M. Badger—288

Spectral transmission of glucose glass in the near infrared, Willi M. Cohn—232

Spectroscopic evidence for hydrogen bonds: comparison of proton-attracting properties of liquids. II. Walter Gordy and S. C. Stanford—170

Spectroscopic evidence for hydrogen bonds: effects of chelation on the carbonyl frequency, Walter Gordy—516

Spectroscopic measurements of gaseous CN. I. Dissociation in the electric discharge, John U. White—79; II. Thermal dissociation of cyanogen, John U. White—459

Ultraviolet of

Acetylene, Hyman Henkin and Milton Burton—297

Aliphatic ketones, A. B. F. Duncan—444

Benzene, W. F. Radle and C. A. Beck—507

Benzene, C_6D_6, H. Sponer—705

Benzene vapor, G. Nordheim, H. Sponer and E. Teller—455

Furan, Lucy W. Pickett—293

Halogens in solution, N. S. Bayliss and A. L. G. Rees—377

N_2O continuum, H. Sponer and L. G. Bonner—33

NO_2, rotational structure of bands, Louis Harris and G. W. King—775

Verification of the theoretical numbers of components into which electronic energy levels are decomposed by crystal fields, Simon Freed and S. I. Weissman—878

Windows for studying the optical properties of hydrogen fluoride gas, B. Vodar, R. Freymann and Yeou Ta—349(L)

Zeeman effect from liquids, solutions of salts of europium, Simon Freed, S. I. Weissman and G. J. Rotariu—291(L)

Adsorption (see **Surface Phenomena**)

Alloys
Beta′-beta transformation in lithium-lead alloys, T. C. Wilson—13
On the kinetics of the order-disorder transformation in Cu_3Au, Sidney Siegel—860
Amorphous State
New uviol glass of the binary system CaF_2-SiO_2, Choong Shin-Piaw—129(L)
Silicate glasses, M. L. Huggins—641(L)
Spectral transmission of glucose glass in the near infra-red, Willi M. Cohn—232
Windows for studying the optical properties of hydrogen fluoride gas, B. Vodar, R. Freymann and Yeou Ta—349(L)
Apparatus and Methods
Production of high velocity atomic beams, I. Amdur and H. Pearlman—7; Erratum—998(L)
Atomic Beams
Chemical detector for molecular beams, J. H. Simons and J. Glasser—547
Of high velocity, I. Amdur and H. Pearlman—7; Erratum—998(L)
Study of the diffraction of protons of medium energy vapor molecules, H. J. Yearian—24

Chemical Reactions (see **Kinetics of Reaction**)
Collision Phenomena
Quenching and vibrational energy transfer in the fluorescence spectrum of S_2, Eric Durand—46
Conductance
Conductivity in insulators and its interpretation, A. von Hippel—605
Errors in the determination of the dissociation constant of a weak acid by the extrapolation method, Mary L. Kilpatrick—306
Variation of the transference numbers of potassium chloride in aqueous solution with temperature, R. W. Allgood, D. J. Le Roy and A. R. Gordon—418
Crystal Structure
Consistent notation for point positions in space groups, L. W. McKeehan—346
Of sodium sulfate III, Ludo K. Frevel—290(L)
Some hydrogen bridge models for globular proteins, M. L. Huggins—598
Studies of equilibrium solid solutions in ionic lattices. Systems: $KMnO_4-KClO_4-H_2O$ and $NH_4Cl-MnCl_2-H_2O$, A. L. Greenberg and G. H. Walden, Jr.—645
Crystalline State
Absorption spectra of europium ion in some hydrated salts, F. H. Spedding, C. G. Moss and R. C. Waller—908
Beta′-beta transformation in lithium-lead alloys, T. C. Wilson—13
Comment on Born's thermodynamic theory of melting, Lewis Balamuth—127(L)
Conductivity in insulators and its interpretation, A. von Hippel—605
Crystal structure of sodium sulfate III, L. K. Frevel—290(L)
Directional catalytic activity of a single crystal of copper, A. T. Gwathmey and A. F. Benton—569(L)
Directional oxidation of a single crystal of copper by heating in air at reduced pressure, A. T. Gwathmey and Arthur F. Benton—431(L)
Elasticity of crystals, Francis Birch and Dennison Bancroft—641(L)
Evidence of krypton in iodyrite, F. W. Hillis, R. C. McReynolds and E. B. Feiring—128(L)
Heterogeneous ortho-paraconversion on paramagnetic crystals, L. Farkas and L. Sandler—248
Infra-red absorption of organic hydroxyl compounds in the solid state in the 3μ region, Mansel M. Davies—577
Infra-red absorption studies. X. Infra-red absorption of hydrogen fluoride in the vapor state and in solution in an inert solvent, A. M. Buswell, R. L. Maycock and W. H. Rodebush—362
Kinetics of phase change. II. Transformation-time relations for random distribution of nuclei, Melvin Avrami—212
Lattice of rubber, L. C. Misch and A. J. A. van der Wyk—127(L)
Lattice summations for hexagonal close-packed crystals, Brother Gabriel Kane and M. G. Mayer—642(L)
Lattice vibrations of crystals and the corresponding vibrations of their solutions, S. I. Weissman and Simon Freed—227, 840
Magnetic susceptibility of silver subfluoride, Simon Freed, Nathan Sugarman and R. P. Metcalf—225
Note on the Zeeman effect of chrome alum, J. H. Van Vleck—787
On phase changes in crystals arising from hindered molecular rotation, J. G. Kirkwood—205
On the elasticity of crystals, Sidney Siegel and Robert Cummerow—847(L)
On the energy levels of chrome alum, R. Finkelstein and J. H. Van Vleck—790
On the kinetics of the order-disorder transformation in Cu_3Au, Sidney Siegel—860
On the theory of fusion, J. G. Kirkwood and Elizabeth Monroe—845
Physics of stressed solids, R. W. Goranson—323
Short table of quantities used in computations of cubic space lattices, L. W. McKeehan—567
Specific heat of tantalum at low temperatures and the effect of small amounts of dissolved hydrogen, K. K. Kelley—316
Statistical mechanics of cooperative phenomena, J. G. Kirkwood—623
Studies of equilibrium solid solutions in ionic lattices. Systems: $KMnO_4-KClO_4-H_2O$ and $NH_4Cl-MnCl_2-H_2O$, A. L. Greenberg and G. H. Walden, Jr.—645
Transition in nickel nitrate hexammoniate, E. A. Long and F. C. Toettcher—504(L)
Verification of the theoretical numbers of components into which electronic energy levels are decomposed by crystal fields, Simon Freed and S. I. Weissman—878
X-ray investigation of the phase transitions of sodium palmitate, F. G. Chesley—643(L)

Deuterium (see **Isotopes**)
Dielectric Constants
Dielectric polarization in solution. I. Failure of the Clausius-Mosotti equation, W. H. Rodebush and C. R. Eddy—424; II. The polarization of some alcohols as a function of concentration and temperature, W. H. Rodebush, C. R. Eddy and L. D. Eubank—889
Local field in polarized dielectrics, George Jaffé—879
Diffraction of Protons
Study of the diffraction of protons of medium energy by vapor molecules, H. J. Yearian—24
Diffusion
Confirmation of the theory of thermal diffusion, T. I. Taylor and George Glockler—843
Effect of gravitational field on the thermal diffusion separation method, Milton Farber and W. F. Libby —965
Lifetime of fluorescence in diacetyl and acetone, G. M. Almy and Scott Anderson—805
Note on the efficiency of the thermal diffusion process for separating isotopes, J. W. Westhaver and A. K. Brewer—314
Rate of solution of metals in acids as a function of overvoltage. I. The diffusion potential, G. E. Kimball and Alvin Glassner—815; II. The solution of cadmium in sulfuric acid—820
Separation by thermal diffusion of mixtures of gases having the same molecular weight, F. T. Wall and C. E. Holley, Jr.—949
Thermal diffusion separation of different gases of the same molecular weight, F. T. Wall and C. E. Holley, Jr.—348(L)
Thermal diffusion separation of radioactive and ordinary hydrogen isotopes, G. T. Seaborg, A. C. Wahl and J. W. Kennedy—639
Variation of the differential diffusion constant of sulphuric acid with temperature, E. A. Hollingshead and A. R. Gordon—423
Dipole Moments
Calculation of dipole moments from rates of nitration of substituted benzenes and its significance for organic chemistry, Taikei Ri and Henry Eyring—433
Dielectric polarization in solution. I. Failure of the Clausius-Mosotti equation, W. H. Rodebush and C. R. Eddy—424;II. The polarization of some alcohols as a function of concentration and temperature, W. H. Rodebush, C. R. Eddy and L. D. Eubank—889
Local field in polarized dielectrics, George Jaffé—879
Solvent action on optical rotatory power. III. The influence of liquid structure on the interaction of dipoles, C. O. Beckmann and H. C. Marks—827; IV. The rotivity of dipropionyl-diethyl-*d*-tartrate and *l*-menthyl acetate in aromatic and aliphatic solvents—831
Dissociation
Errors in the determination of the dissociation constant of a weak acid by the extrapolation method, Mary L. Kilpatrick—306
Of iodine vapor, H. M. Spencer—503(L)
Spectroscopic measurements of gaseous CN. I. Dissociation in the electric discharge. II. Thermal dissociation of cyanogen, John U. White—79, 459

Electrochemistry
Absolute rates of heterogeneous reactions. II. Electrode reactions, G. E. Kimball—199
Absolute reaction rates and the photovoltaic effect, Edward Adler—500
Effect of electric fields on the decomposition of nitrous oxide by alpha-rays, A. D. Kolumban and H. Essex —450
Efficiency of the electrolytic separation of lithium isotopes, H. L. Johnston and C. A. Hutchison—869
Ozone in silent electric discharge, W. H. Otto and W. H. Bennett—899
Photogalvanic effect. I. The photochemical properties of the thionine-iron system, E. Rabinowitch—551; II. Photogalvanic properties of the thionine-iron system, E. Rabinowitch—560
Rate of solution of metals in acids as a function of overvoltage. I. The diffusion potential, G. E. Kimball and Alvin Glassner—815; II. The solution of cadmium in sulfuric acid, G. E. Kimball and Alvin Glassner—820
Electron Affinity
Experimental determination of the electron affinity of chlorine, J. J. Mitchell and J. E. Mayer—282
Electron Diffraction
Molecular structure of isobutane, J. Y. Beach and John Walter—303
Molecular structure of nitrogen dioxide and nitric acid by electron diffraction, L. R. Maxwell and V. M. Mosley—738
Radial distribution method in electron diffraction, John Walter and J. Y. Beach—601
Element
Evidence of krypton in iodyrite, F. W. Hillis, R. C. McReynolds and E. B. Feiring—128(L)
Emission Spectra
Negative bands of the heavy nitrogen molecules, R. W. Wood and G. H. Dieke—351
Energy Transfer
Quenching and vibrational energy transfer in the fluorescence spectrum of S_2, Eric Durand—46
Role of heat conduction in thermal gaseous explosions, O. K. Rice—727
Errata
High velocity atomic beams, I. Amdur and H. Pearlman —998(L)
Second virial coefficient of ethane, E. E. Roper—290(L)
Explosion (see **Ignition**)

Fluorescence
Of diacetyl, G. M. Almy, H. Q. Fuller and G. D. Kinzer —37
Lifetime of fluorescence in diacetyl and acetone, G. M. Almy and Scott Anderson—805
Quenching and vibrational energy transfer in the fluorescence spectrum of S_2, Eric Durand—46

Fractionating Columns
And the concentration of isotopes, Karl Cohen—588
Free Rotation (see **Rotation**)

Glass (see **Amorphous State**)

Heat Capacity (see **Thermodynamic Properties**)
Hindered Rotation (see **Rotation**)
Hydrogen Bonds
Absorption spectra of liquid HF and of its aqueous solution in the region λλ8000–11,000, A. L. Wahrhaftig—349(L)
Combination frequencies associated with the first and second overtone and fundamental OH absorption in phenol and its halogen derivatives, O. R. Wulf, E. J. Jones and L. S. Deming—753
Determination of the proton-attracting properties of liquids, L. P. Hammett—644(L)
Infra-red absorption of phenol and its halogen derivatives in the region of the second overtone of the OH absorption, O. R. Wulf and E. J. Jones—745
Infra-red absorption studies. X. Infra-red absorption of hydrogen fluoride in the vapor state and in solution in an inert solvent, A. M. Buswell, R. L. Maycock and W. H. Rodebush—362
Infra-red absorptions of organic hydroxyl compounds in the solid state in the 3μ region, M. M. Davies—577
Infra-red O−H band and association, J. Errera, R. Gaspart and H. Sack—63
Note on the infra-red absorption spectra of the vapors of DCOOH and DCOOD, R. C. Herman and V. Williams—447
Relation between the energy of a hydrogen bond and the frequencies of the O−H bands, R. M. Badger—288
Spectroscopic evidence for hydrogen bonds: comparison of proton-attracting properties of liquids. II., Walter Gordy and S. C. Stanford—170; effects of chelation on the carbonyl frequency, Walter Gordy—516

Ignition
On the induction period in thermal explosions, D. A. Frank-Kamenetzky—125(L)
Role of heat conduction in thermal gaseous explosions, O. K. Rice—727
Thermal reaction between hydrogen and oxygen. I. Comparison of experiments and theory, O. Oldenberg and H. S. Sommers, Jr.—468
Infra-Red Spectra (see **Absorption Spectra**)
Intensities of Electronic Transitions in Molecular Spectra
Calculations on the long wave-length halogen spectra, R. S. Mulliken—234
Intensities in molecular electronic spectra. X. Calculations on mixed-halogen, hydrogen halide, alkyl halide, and hydroxyl spectra, R. S. Mulliken—382
Isotopes
Concentration of C^{13}, C. A. Hutchison, D. W. Stewart and H. C. Urey—532
Confirmation of the theory of thermal diffusion, T. I. Taylor and George Glockler—843
Effect of gravitational field on the thermal diffusion separation method, Milton Farber and W. F. Libby—985
Efficiency of the electrolytic separation of lithium isotopes, H. L. Johnston and C. A. Hutchison—869
Exchange of oxygen between NO and NO_2, Edgar Leifer—301
Exchange reaction of gaseous bromine and hydrogen bromide, L. C. Liberatore and E. O. Wiig—165
Exchange reactions between gaseous alkyl bromides, bromine and hydrogen bromide, L. C. Liberatore and E. O. Wiig—349(L)
Further concentration of S^{34}, D. W. Stewart and Karl Cohen—904
Hydrogen isotope exchange reaction, J. O. Halford—243
Mechanism of the exchange reaction between gaseous bromine and hydrogen bromide, W. F. Libby—348(L)
Negative bands of the heavy nitrogen molecules, R. W. Wood and G. H. Dieke—351
Note on the efficiency of the thermal diffusion process for separating isotopes, J. W. Westhaver and A. K. Brewer—314
Packed fractionating columns and the concentration of isotopes, Karl Cohen—588
Raman spectra of amino acids and related compounds. V. Deuterium substitution in the amino group, J. T. Edsall and Herbert Scheinberg—520
Thermal diffusion separation of different gases of the same molecular weight, F. T. Wall and C. E. Holley, Jr.—348(L), 949
Thermal diffusion separation of radioactive and ordinary hydrogen isotopes, G. T. Seaborg, A. C. Wahl and J. W. Kennedy—639

Kinetics of Reactions
Absolute rates of heterogeneous reactions. II. Electrode reactions, George E. Kimball—199
Absolute reaction rates and the photovoltaic effect, Edward Adler—500
Application of the theory of absolute reaction rates to heterogeneous processes. I. The adsorption and desorption of gases, K. J. Laidler, S. Glasstone and H. Eyring—659; II. Chemical reactions on surfaces, K. J. Laidler, S. Glasstone and H. Eyring—667
Azomethane and atomic hydrogen, H. Henkin and H. A. Taylor—1
Calculation of dipole moments from rates of nitration of substituted benzenes and its significance for organic chemistry, Taikei Ri and Henry Eyring—433
Directed valence in chemical reactions, J. L. Magee—677
Directional catalytic activity of a single crystal of copper, A. T. Gwathmey and A. F. Benton—569(L)
Directional oxidation of a single crystal of copper by heating in air at reduced pressure, A. T. Gwathmey and A. F. Benton—431(L)
Effect of electric fields on the decomposition of nitrous oxide by alpha-rays, A. D. Kolumban and H. Essex—450
Exchange of oxygen between NO and NO_2, Edgar Leifer—301
Exchange reaction of gaseous bromine and hydrogen bromide, L. C. Liberatore and E. O. Wiig—165

Kinetics of Reactions (continued)
Exchange reactions between gaseous alkyl bromides, bromine and hydrogen bromide, L. C. Liberatore and E. O. Wiig—349(L)
Hydrogen isotope exchange reaction, J. O. Halford—243
Investigations on the high temperature photolysis of acetaldehyde, D. C. Grahame and G. K. Rollefson—98
Kinetics of phase change. II. Transformation-time relations for random distribution of nuclei, Melvin Avrami—212
Mechanism of the exchange reaction between gaseous bromine and hydrogen bromide, W. F. Libby—348(L)
Mechanism of reactions involving excited electronic states. The gaseous reactions of the alkali metals and halogens, J. L. Magee—687
Mercury photosensitized decomposition of ethane. IV. The reaction at high temperatures, E. W. R. Steacie and R. L. Cunningham—800
Mercury photosensitized hydrogenation of ethylene, propylene and *n*-butylene, W. J. Moore, Jr. and H. S. Taylor—504(L)
Mercury photosensitized reactions of propane, E. W. R. Steacie and D. J. Dewar—571
Nature of the ions emitted by heated filaments and salts, B. Toubes and G. K. Rollefson—495
Note on the chain photolysis of acetaldehyde in intermittent light, W. L. Haden, Jr., E. P. H. Meibohm and O. K. Rice—998(L)
On the heterogeneous ortho- paraconversion on paramagnetic crystals, L. Farkas and L. Sandler—248
On the induction period in thermal explosions, D. A. Frank-Kamenetzky—125(L)
On the kinetics of the order-disorder transformation in Cu_3Au, Sidney Siegel—860
Photogalvanic effect. I. The photochemical properties of the thionine-iron system, E. Rabinowitch—551; II. Photogalvanic properties of the thionine-iron system, E. Rabinowitch—560
Photolysis of methylethyl ketone, W. J. Moore, Jr. and H. S. Taylor—466
Photosensitization and fluorescence by aromatic hydrocarbon, W. West and W. E. Miller—849
Rate of solution of metals in acids as a function of overvoltage. I. The diffusion potential, G. E. Kimball and Alvin Glassner—815; II. The solution of cadmium in sulfuric acid, G. E. Kimball and Alvin Glassner—820
Reaction of hydrogen atoms with butane, E. W. R. Steacie and E. A. Brown—734
Reactions of ethyl radicals, W. J. Moore, Jr. and H. S. Taylor—396
Reactions of free radicals with organic compounds containing atoms with unshared electron pairs, F. O. Rice, W. D. Walters and P. M. Ruoff—259
Reactions of methyl radicals with benzene, toluene, diphenyl and propylene, H. S. Taylor and J. O. Smith, Jr.—543
Role of heat conduction in thermal gaseous explosions, O. K. Rice—727
Statistical fluctuations in autocatalytic reactions, Max Delbrück—120
Theory of depolymerization of long chain molecules, E. W. Montroll and Robert Simha—721
Thermal reaction between hydrogen and oxygen. I. Comparison of experiments and theory, O. Oldenberg and H. S. Sommers, Jr.—468

Liquids
Comment on Born's thermodynamic theory of melting, Lewis Balamuth—127(L)
Dielectric polarization in solution. II. The polarization of some alcohols as a function of concentration and temperature, W. H. Rodebush, C. R. Eddy and L. D. Eubank—889
Diffraction of x-rays by liquid and plastic sulphur, N. S. Gingrich—29
Electronic absorption spectra in solution: with special reference to the continuous absorption of the halogens, N. S. Bayliss and A. L. G. Rees—377
Entropy of dilution of strong electrolytes in aqueous solutions, H. S. Frank and A. L. Robinson—933
Entropy of vaporization and restricted molecular rotation in liquids, R. S. Halford—496
Lattice vibrations of crystals and the corresponding vibrations of their solutions, S. I. Weissman and Simon Freed—227, 840
Local field in polarized dielectrics, George Jaffé—879
Note on electronic absorption spectra in solution, A. L. G. Rees—429(L)
On the theory of fusion, J. G. Kirkwood and Elizabeth Monroe—845
Raman spectrum of aluminum bromide, E. J. Rosenbaum—643(L)
Solvent action on optical rotatory power. III. The influence of liquid structure on the interaction of dipoles, C. O. Beckmann and H. C. Marks—827; IV. The rotivity of dipropionyl-diethyl-*d*-tartrate and *l*-menthyl acetate in aromatic and aliphatic solvents, H. C. Marks and C. O. Beckmann—831
Zeeman effect from liquids, solutions of salts of europium, Simon Freed, S. I. Weissman and G. J. Rotariu—291(L)

Magnetic Properties
Diamagnetic anisotropy and electronic structure of aromatic molecules, Harvey Brooks—939
Magnetic susceptibility of silver sub-fluoride, Simon Freed, Nathan Sugarman and R. P. Metcalf—225
Note on the Zeeman effect of chrome alum, J. H. Van Vleck—787
On the energy levels of chrome alum, R. Finkelstein and J. H. Van Vleck—790
On the heterogeneous ortho- paraconversion on paramagnetic crystals, L. Farkas and L. Sandler—248
Zeeman effect from liquids, solutions of salts of eruopium, Simon Freed, S. I. Weissman and G. J. Rotariu—291(L)

Mechanics
Calculations of force constants in some methyl compounds, J. W. Linnett—91
Coriolis perturbations in the spectra of silane and germane, G. M. Murphy—71

Mechanics (continued)
Entropy of long chain compounds in the gaseous state, M. L. Huggins—181
Normal vibrations of chains of similar and similarly situated dynamical systems and the infra-red spectrum of undecane, S. E. Whitcomb, H. H. Nielsen and L. H. Thomas—143
Normal vibrations of molecules of the tetramethylmethane type, Samuel Silver—919
Note on the solution of secular equations, B. L. Hicks—569(L)
Simple method for calculating moments of inertia, J. O. Hirschfelder—431(L)
Vibration frequencies and thermodynamic functions of long chain hydrocarbons, K. S. Pitzer—711
Mechanics, Quantum
Determination of internuclear distances and of dissociation energies from force constants, G. B. B. M. Sutherland—161
Directed valence, G. E. Kimball—188
Directed valence in chemical reactions, J. L. Magee—677
Intensities of electronic transitions in molecular spectra. IX. Calculations on the long wave-length halogen spectra, R. S. Mulliken—234
Mechanism of reactions involving excited electronic states. The gaseous reactions of the alkali metals and halogens, J. L. Magee—687
Partition functions and energy levels of molecules with internal torsional motions, B. L. Crawford, Jr.—273
Mechanics, Statistical
Adsorption isotherms for mobile monolayers, William Band—178
Application of the theory of absolute reaction rates to heterogeneous processes. I. The adsorption and desorption of gases, K. J. Laidler, S. Glasstone and H. Eyring—659; II. Chemical reactions on surfaces, K. J. Laidler, S. Glasstone and H. Eyring—667
Beta′-beta transformation in lithium-lead alloys, T. C. Wilson—13
Comment on Born's thermodynamic theory of melting, Lewis Balamuth—127(L)
Dissociation treatment of condensing systems. III. Properties of saturated vapors of H_2O, NH_3, CH_3Cl and CO_2, T. P. Tseng, S. K. Feng, C. Cheng and W. Band—20
Entropy of long chain compounds in the gaseous state, M. L. Huggins—181
On phase changes in crystals arising from hindered molecular rotation, J. G. Kirkwood—205
On the theory of fusion, J. G. Kirkwood and Elizabeth Monroe—845
Partition functions and energy levels of molecules with internal torsional motions, B. L. Crawford, Jr.—273
Role of heat conduction in thermal gaseous explosions, O. K. Rice—727
Statistical fluctuations in autocatalytic reactions, Max Delbrück—120
Statistical mechanics of condensation phenomena in mobile monolayers, William Band—116
Statistical mechanics of cooperative phenomena, J. G. Kirkwood—623
Statistical theory of duplex films, Lawrence S. K. Feng and William Band—977
Theoretical isotherms for adsorption on a square lattice, Lewi Tonks—477
Theory of depolymerization of long chain molecules, E. W. Montroll and Robert Simha—721
Molecular Beams (see **Atomic Beams**)
Molecular Films (see **Surface Phenomena**)
Molecular Spectra (see **Absorption Spectra, Fluorescence, and Intensities of Electronic Transitions**)
Molecular Structure and Constants (see also **Intensities of Electronic Transitions**)
Absorption of phenyl mustard oil in the 4.8μ region, Dudley Williams—513
Absorption spectra of gaseous methylamine and dimethylamine in the photographic infra-red, A. P. Cleaves, H. Sponer and L. G. Bonner—784
Bond length and bond strength, Milton Burton—743(L)
Bond strength and potential energy relationships in acetylene, Hyman Henkin and Milton Burton—297
Calculation of dipole moments from rates of nitration of substituted benzenes and its significance for organic chemistry, Taikei Ri and Henry Eyring—433
Calculation of force constants in some methyl compounds, J. W. Linnett—91
Combination frequencies associated with the first and second overtone and fundamental OH absorption in phenol and its halogen derivatives, O. R. Wulf, E. J. Jones and L. S. Deming—753
Coriolis perturbations in the spectra of silane and germane, G. M. Murphy—71
Determination of internuclear distances and of dissociation energies from force constants, G. B. B. M. Sutherland—161
Determination of the proton-attracting properties of liquids, L. P. Hammett—644(L)
Diamagnetic anisotropy and electronic structure of aromatic molecules, Harvey Brooks—939
Diffraction of x-rays by liquid and plastic sulphur, N. S. Gingrich—29
Electronic absorption spectra in solution: with special reference to the continuous absorption of the halogens, N. S. Bayliss and A. L. G. Rees—377
Entropy of dimethyl acetylene from low temperature calorimetric measurements. Free rotation in the dimethyl acetylene molecule, D. W. Osborne, C. S. Garner and D. M. Yost—131(L)
Entropy of long chain compounds in the gaseous state, M. L. Huggins—181
Experimental study of the near ultraviolet absorption spectrum of benzene, W. F. Radle and C. A. Beck—507
Fine structure of the 3.35μ band of ethylene, L. G. Smith—798
Fundamental frequencies of certain trihalomethanes, G. Glockler and G. R. Leader—699

Molecular Structure and Constants (continued)

Hindered rotation. I. Configuration of the cyclohexane molecule, A. Langseth and B. Bak—403; II. Hindered rotation about the C−C single bond in tetrachloroethane, A. Langseth and H. J. Bernstein—410; III. Qualitative nature of the interactions hindering internal rotation, A. Langseth, H. J. Bernstein and B. Bak—415

Hindered rotation in $CH_2D \cdot CH_2Br$, A. Langseth, H. J. Bernstein and B. Bak—430(L)

Infra-red absorption of phenol and its halogen derivatives in the region of the second overtone of the OH absorption, O. R. Wulf and E. J. Jones—745

Infra-red absorption spectrum of methyl amine, R. G. Owens and E. F. Barker—229

Infra-red and Raman spectra of polyatomic molecules. XII. Methyl acetylene, B. L. Crawford, Jr.—526

Interpretation of the Raman spectra and infra-red spectra of the halogen derivatives of methane, H. Volkringer, J. Lecomte and A. Tchakirian—126(L)

Lattice of rubber, L. C. Misch and A. J. A. van der Wyk—127(L)

Lengths and strengths of atomic bonds, Dorothy Wrinch and David Harker—502(L)

Molecular structure of isobutane, J. Y. Beach and John Walter—303

Molecular structure of nitrogen dioxide and nitric acid by electron diffraction, L. R. Maxwell and V. M. Mosley—738

Near ultraviolet absorption spectrum of heavy benzene, H. Sponer—705

Negative bands of the heavy nitrogen molecules, R. W. Wood and G. H. Dieke—351

Normal vibrations of chains of similar and similarly situated dynamical systems and the infra-red spectrum of undecane, S. E. Whitcomb, H. H. Nielsen and L. H. Thomas—143

Normal vibrations of molecules of the tetramethylmethane type, Samuel Silver—919

Note on the entropy of gaseous diatomic hydrides and halides, D. P. Stevenson—898(L)

Note on the ultraviolet absorption systems of benzene vapor, G. Nordheim, H. Sponer and E. Teller—455

On the predissociation of several diatomic molecules, G. Herzberg and L. G. Mundie—263

On the presence of HNC in hydrogen cyanide, G. Herzberg—847(L)

On the stable relative orientation of groups connected by a carbon-carbon single bond, Verner Schomaker and D. P. Stevenson—637

Potential function of acetylene molecule. II. Ta-You Wu—489

Radial distribution method in electron diffraction, John Walter and J. Y. Beach—601

Raman spectra of phosphorus methyl and arsenic methyl and the force constants of the methyl compounds of the fifth group elements, E. J. Rosenbaum, D. J. Rubin and C. R. Sandberg—366

Raman spectrum of aluminum bromide, E. J. Rosenbaum—643(L)

Relation between the energy of a hydrogen bond and the frequencies of the O−H bands, R. M. Badger—288

Rotational structure of the ultraviolet bands of NO_2, Louis Harris and G. W. King—775

Structure of phosphine and related hydrides, D. P. Stevenson—285

Study of the diffraction of protons of medium energy by vapor molecules, H. J. Yearian—24

Supersonic effects of water vapor in CO_2 and their relation to molecular vibrations, W. H. Pielemeier, H. L. Saxton and D. Telfair—106

Ultraviolet absorption of NO_2, Louis Harris, G. W. King, W. S. Benedict and R. W. B. Pearse—765

Vibration frequencies and thermodynamic functions of long chain hydrocarbons, K. S. Pitzer—711

Vibration spectra and molecular structure. IX. Further studies of the vapors of the fatty acid series, R. C. Herman—252

Vibration spectra of hydrozoic acid, methyl azide, and methyl isocyanate. The thermodynamic functions of hydrazoic acid, E. H. Eyster and R. H. Gillette—369

Optical Activity

Solvent action on optical rotatory power. III. The influence of liquid structure on the interaction of dipoles, C. O. Beckmann and H. C. Marks—827; IV. The rotivity of dipropionyl-diethyl-*d*-tartrate and *l*-menthyl acetate in aromatic and aliphatic solvents, H. C. Marks and C. O. Beckmann—831

Optical Properties

Windows for studying the optical properties of hydrogen fluoride gas, B. Vodar, R. Freymann and Yeou Ta—349(L)

Ozone

In the silent electric discharge, W. H. Otto and W. H. Bennett—899

Phase Transitions

Beta′-beta transformation in lithium-lead alloys, T. C. Wilson—13

Dissociation treatment of condensing systems. III. Properties of saturated vapors of H_2O, NH_3, CH_3Cl and CO_2, T. P. Tseng, S. K. Feng, C. Cheng and W. Band—20

Empirical equation for thermodynamic properties of light hydrocarbons and their mixtures. I. Methane, ethane, propane and *n*-butane, Manson Benedict, G. B. Webb and L. C. Rubin—334

Kinetics of phase change. II. Transformation-time relations for random distribution of nuclei, Melvin Avrami—212

On phase changes in crystals arising from hindered molecular rotation, J. G. Kirkwood—205

On the kinetics of the order-disorder transformation in Cu_3Au, Sidney Siegel—860

On the theory of fusion, J. G. Kirkwood and Elizabeth Monroe—845

Specific heat of tantalum at low temperatures and the effect of small amounts of dissolved hydrogen, K. K. Kelley—316

Phase Transitions (continued)
Thermodynamics of films: energy and entropy of extension and spreading of insoluble monolayers, W. D. Harkins, T. F. Young and Edward Boyd—965
Transformations in monolayers, D. G. Dervichian—347(L)
Transition in nickel nitrate hexammoniate, E. A. Long and F. C. Toettcher—504(L)
Ultrasonic velocity in carbon dioxide and ethylene in the critical region, C. M. Herget—537
X-ray investigation of the phase transitions of sodium palmitate, F. G. Chesley—643(L)

Photochemistry
Absolute reaction rates and the photovoltaic effect, Edward Adler—500
Investigations on the high temperature photolysis of acetaldehyde, D. C. Grahame and G. K. Rollefson—98
Lifetime of fluorescence in diacetyl and acetone, G. M. Almy and Scott Anderson—805
Mercury photosensitized decomposition of ethane. IV. The reaction at high temperatures, E. W. R. Steacie and R. L. Cunningham—800
Mercury photosensitized hydrogenation of ethylene, propylene and *n*-butylene, W. J. Moore, Jr. and Hugh S. Taylor—504(L)
Mercury photosensitized reactions of propane, E. W. R. Steacie and D. J. Dewar—571
Note on the chain photolysis of acetaldehyde in intermittent light, W. L. Haden, Jr., E. P. H. Meibohm and O. K. Rice—998(L)
Photogalvanic effect. I. The photochemical properties of the thionine-iron system, E. Rabinowitch—551; II. Photogalvanic properties of the thionine-iron system, E. Rabinowitch—560
Photolysis of methylethyl ketone, W. J. Moore, Jr. and H. S. Taylor—466
Photosensitization and fluorescence by aromatic hydrocarbons, W. West and W. E. Miller—849
Reaction of hydrogen atoms with butane, E. W. R. Steacie and E. A. Brown—734
Reactions of ethyl radicals, W. J. Moore, Jr. and H. S. Taylor—396
Reactions of methyl radicals with benzene, toluene, diphenyl methane and propylene, H. S. Taylor and J. O. Smith, Jr.—543

Proteins
Some hydrogen bridge models for globular proteins, M. L. Huggins—598

Quantum Mechanics (see **Mechanics, Quantum**)

Raman Spectra
And infra-red spectra of polyatomic molecules. X. C_2, D_2, C_2DH and C_2H_2, Fred Stitt—56
And infra-red spectra of polyatomic molecules. XI. Dimethyl sulfide $(CH_3)_2S$, R. Fonteyne—60
And infra-red spectra of polyatomic molecules. XII. Methyl acetylene, B. L. Crawford, Jr.—526
Fundamental frequencies of certain trihalomethanes, G. Glockler and G. R. Leader—699
Hindered rotation. I. Configuration of the cyclohexane molecule, A. Langseth and B. Bak—403; II. Hindered rotation about the C−C single bond in tetrachloroethane, A. Langseth and H. J. Bernstein—410
Hindered rotation in $CH_2D \cdot CH_2Br$, A. Langseth, H. J. Bernstein and B. Bak—430(L)
Interpretation of the Raman spectra and infra-red spectra of the halogen derivatives of methane, H. Volkringer, J. Lecomte and A. Tchakirian—126(L)
Of amino acids and related compounds. V. Deuterium substitution in the amino group, J. T. Edsall and Herbert Scheinberg—520
Of fluorochlorobromomethane, George Glockler and G. R. Leader—125(L)
Of phosphorus methyl and arsenic methyl and the force constants of the methyl compounds of the fifth group elements, E. J. Rosenbaum, D. J. Rubin and C. R. Sandberg—366
Of simple ethers, F. F. Cleveland, M. J. Murray, H. H. Haney and Julia Shackelford—153
Of symmetric difluorotetrachloroethane, George Glockler and C. G. Sage—291(L)
On the presence of HNC in hydrogen cyanide, G. Herzberg—847(L)
Raman effect of fluorodichloromethane, George Glockler, W. F. Edgell and G. R. Leader—897(L)
Raman spectrum of aluminum bromide, E. J. Rosenbaum—643(L)
Raman spectrum of 1-bromo-dodecane, F. F. Cleveland and M. J. Murray—867

Rotation
Calculation of the heat capacity and entropy of methylamine from spectroscopic data alone. The torsional mode of vibration, J. G. Aston and P. M. Doty—743(L)
Entropy of dimethyl acetylene from low temperature calorimetric measurements. Free rotation in the dimethyl acetylene molecule, D. W. Osborne, C. S. Garner and D. M. Yost—131(L)
Entropy of dimethyl sulfide from low temperature calorimetric measurements. Restricted rotation of the methyl groups, D. W. Osborne, R. N. Doescher and D. M. Yost—506(L)
Entropy of vaporization and restricted molecular rotation in liquids, R. S. Halford—496
Gaseous heat capacity and restricted internal rotation of diborane, Fred Stitt—981
Hindered rotation in $CH_2D \cdot CH_2Br$, A. Langseth, H. J. Bernstein and B. Bak—430(L)
Hindered rotation. I. Configuration of the cyclohexane molecule, A. Langseth and B. Bak—403; II. Hindered rotation about the C−C single bond in tetrachloroethane, A. Langseth and H. J. Bernstein—410; III. Qualitative nature of the interactions hindering internal rotation, A. Langseth, H. J. Bernstein and B. Bak—415
Hindered rotation in methyl alcohol, B. L. Crawford, Jr.—744(L)

Rotation (continued)
On phase changes in crystals arising from hindered molecular rotation, J. G. Kirkwood—205
Partition functions and energy levels of molecules with internal torsional motions, B. L. Crawford, Jr.—273
Rotational structure of the ultraviolet bands of NO_2, Louis Harris and G. W. King—775

Solutions (see **Liquids**)
Sound
Supersonic effects of water vapor in CO_2 and their relation to molecular vibrations, W. H. Pielemeier, H. J. Saxton and D. Telfair—106
Ultrasonic velocity in carbon dioxide and ethylene in the critical region, C. M. Herget—537
Spectra (see **Atomic Spectra and Molecular Spectra**)
Statistical Mechanics (see **Mechanics, Statistical**)
Surface Phenomena
Adsorption isotherms for mobile monolayers, William Band—178
Application of the theory of absolute reaction rates to heterogeneous processes. I. The adsorption and desorption of gases, K. J. Laidler, S. Glasstone and H. Eyring—659; II. Chemical reactions on surfaces, K. J. Laidler, S. Glasstone and H. Eyring—667
States of monolayers on an aqueous subphase, W. D. Harkins and Edward Boyd—129(L)
Statistical mechanics of condensation phenomena in mobile monolayers, William Band—116
Statistical theory of duplex films, Lawrence S. K. Feng and William Band—977
Theoretical and experimental analysis of the capillary rise method for measuring the surface tension of solutions of electrolytes, Grinnell Jones and L. D. Frizzell—986
Theoretical isotherms for adsorption on a square lattice, Lewi Tonks—477
Thermodynamics of films: energy and entropy of extension and spreading of insoluble monolayers, W. D. Harkins, T. F. Young and Edward Boyd—954
Transformations in monolayers, D. G. Dervichian—347(L)

Thermionic Emission
Experimental determination of the electron affinity of chlorine, J. J. Mitchell and J. E. Mayer—282
Nature of the ions emitted by heated filaments and salts, B. Toubes and G. K. Rollefson—495
Thermodynamic Properties
Bond length and bond strength, Milton Burton—743(L)
Calculation of the heat capacity and entropy of methylamine from spectroscopic data alone. The torsional mode of vibration, J. G. Aston and P. M. Doty—743(L)
Comment on Born's thermodynamic theory of melting, Lewis Balamuth—127(L)
Concentration of C^{13}, C. A. Hutchison, D. W. Stewart and H. C. Urey—532
Determination of internuclear distances and of dissociation energies from force constants, G. B. B. M. Sutherland—161
Determination of the proton-attracting properties of liquids, L. P. Hammett—644(L)
Dissociation of iodine, H. M. Spencer—503(L)
Empirical equation for thermodynamic properties of light hydrocarbons and their mixtures. I. Methane, ethane, propane and *n*-butane, Manson Benedict, G. B. Webb and L. C. Rubin—334
Entropy of dilution of strong electrolytes in aqueous solutions, H. S. Frank and A. L. Robinson—933
Entropy of dimethyl acetylene from low temperature calorimetric measurements. Free rotation in the dimethyl acetylene molecule, D. W. Osborne, C. S. Garner and D. M. Yost—131(L)
Entropy of dimethyl sulfide from low temperature calorimetric measurements. Restricted rotation of the methyl groups, D. W. Osborne, R. N. Doescher and D. M. Yost—506(L)
Entropy of long chain compounds in the gaseous state, M. L. Huggins—181
Errors in the determination of the dissociation constant of a weak acid by the extrapolation method, M. L. Kilpatrick—306
Experimental determination of the electron affinity of chlorine, J. J. Mitchell and J. E. Mayer—282
Gaseous heat capacities. II. (the lower hydrocarbons), G. B. Kistiakowsky and W. W. Rice—610; III. (ethers and hydrocarbons), G. B. Kistiakowsky and W. W. Rice—618
Gaseous heat capacity and restricted internal rotation of diborane, Fred Stitt—981
Hindered rotation in methyl alcohol, B. L. Crawford, Jr.—744(L)
Joule-Thomson effect in mixtures of helium and argon, J. R. Roebuck and H. Osterberg—627
Lengths and strengths of atomic bonds, Dorothy Wrinch and David Harker—502(L)
Low temperature gaseous heat capacities of certain C_3 hydrocarbons, G. B. Kistiakowsky, J. R. Lacher and W. W. Ransom—970
Note on the entropy of gaseous diatomic hydrides and halides, D. P. Stevenson—898(L)
Of the PN molecule, K. J. McCallum and Edgar Leifer—505(L)
On the presence of HNC in hydrogen cyanide, G. Herzberg—847(L)
Physics of stressed solids, R. W. Goranson—323
Second virial coefficient of ethane, E. E. Roper—290(L)
Some heat capacity data for isopropyl alcohol vapor, G. S. Parks and C. H. Shomate—429(L)
Specific heat of tantalum at low temperatures and the effect of small amounts of dissolved hydrogen, K. K. Kelley—316
Spectroscopic measurements of gaseous CN. II. Thermal dissociation of cyanogen, J. U. White—459
Studies of equilibrium solid solutions in ionic lattices. Systems: $KMnO_4-KClO_4-H_2O$ and $NH_4Cl-MnCl_2-H_2O$, A. L. Greenberg and G. H. Walden, Jr.—645
Thermodynamic properties of methyl cyanide and methyl isocyanide, R. H. Ewell and J. F. Bourland—635

Thermodynamic Properties (continued)
Thermodynamics of films: energy and entropy of extension and spreading of insoluble monolayers, W. D. Harkins, T. F. Young and Edward Boyd—954
Transition in nickel nitrate hexammoniate, E. A. Long and F. C. Toettcher—504(L)
Vibration frequencies and thermodynamic functions of long chain hydrocarbons, K. S. Pitzer—711
Vibration spectra and molecular structure. IX. Further studies of the vapors of the fatty acid series, R. C. Herman—252
Vibration spectra of hydrazoic acid, methyl azide, and methyl isocyanate. The thermodynamic functions of hydrazoic acid, E. H. Eyster and R. H. Gillette—369
X-ray investigation of the phase transitions of sodium palmitate, F. G. Chesley—643(L)
Transference Numbers
Variation of the transference numbers of potassium chloride in aqueous solution with temperature, R. W. Allgood, D. J. Le Roy and A. R. Gordon—418
Ultrasonics (see **Sound**)
Valence (see also **Mechanics, Quantum**)
Vapor Pressure
Dissociation treatment of condensing systems. III. Properties of saturated vapors of H_2O, NH_3, CH_3Cl and CO_2, T. P. Tseng, S. K. Feng, C. Cheng and W. Band—20
Entropy of vaporization and restricted molecular rotation in liquids, R. S. Halford—496
X-Ray Diffraction
By liquid and plastic sulphur, N. S. Gingrich—29
Lattice of rubber, L. C. Misch and A. J. A. van der Wyk—127(L)
Studies of equilibrium solid solutions in ionic lattices. Systems: $KMnO_4-KClO_4-H_2O$ and $NH_4Cl-MnCl_2-H_2O$, A. L. Greenberg and G. H. Walden, Jr.—645
X-ray investigation of the phase transitions of sodium palmitate, F. G. Chesley—643(L)
